

# geographic information systems analyst

- **GIS & Satellite Imagery Analysis**
- **Senior Position with a Career Path**

Our client is involved in developing carbon emission reduction and offset projects around the world.

You will conduct GIS and satellite imagery analysis activities to support projects in the land use, land use change and forestry sectors. This will include GIS, aerial and satellite imagery analysis and interpretation for the purposes of carbon stock analysis; land cover area change analysis, spatial data visualisation and map production and accuracy assessment reporting.

You have an appropriate degree and at least two years experience as a Spatial Analyst using GIS packages and Satellite imagery retrieval and analysis. Exposure to forest inventory, forest resource data analysis or biodiversity would be highly regarded.

If you would like to be part of this unique and 'go ahead' organisation please call **Michael Green** or submit your resume.
