

BRADMAN ENERGY & CARBON RECRUITMENT CANDIDATES NEWSLETTER SEPTEMBER 2010

NOTE: More candidates in each category are available.

Prepared by Julien Lacave – Senior Consultant Energy & Carbon – Bradman Recruitment Group

Policy & Economics

1126706

Bachelor of Engineering, Master of Building Science and Environmental Economics + NABERS. Senior public service career in both Federal Department of the Environment and State Departments with speciality in energy, renewable energy technologies, energy policies, rebate schemes, National Energy Consumer Framework (NECF), energy strategies, CPRS, ETS, green building.

1115173

Bachelor of Applied Science. 20 years in the private sector and 8 years in senior roles in Government. Specialised in energy and environmental strategies and investment. Looking for a leading role in the private sector.

1123905

Masters in International Trade Law (Hons.) with speciality in Interaction between international trade and climate change law, Bachelor of Business. 5 years experience in Federal Government in the climate change and sustainability sector. Looking for a senior role in the private sector.

Legal, Climate Change

1111036

Bachelor of Arts and Bachelor of Laws. 20 years experience in the legal sector, including private practice corporate and government. Expert in government, construction & engineering projects, energy, corporate & commercial, industry and markets consulting.

1124027

Graduate Diploma of Legal Practice and Bachelor of Laws. 4 years experience in the private sector in the field of carbon, sustainability and climate change. Currently seeking a role in sustainability, environment or corporate strategy.

1123707

BCom and LLB (1st class Honours). Admitted to the Supreme Court. Specialised in climate change law and policy and has 4 years experience in energy and renewable energy technologies, corporate social responsibility and sustainability, carbon capture and storage technologies. Currently looking for an in house role.

Business Development - Energy Sector**1113293**

MBA and a Bachelor of Electrical Engineering. 14 years international experience in the private sector in business development in CDM and energy, carbon trading services and electrical engineering and project management in large energy projects. Looking for a new role in the private sector.

1120940

Masters in Business Administration with a Major in Marketing. Over 10 years experience in marketing and business strategy for building products, services, solar and energy efficiency industries. Responsible for the formulation of a benchmark Training Manual for Residential Energy Efficiency Products, which is certified by the Federal Government as a key resource.

1098369

Electrical Trade Certificate, Certificate in Applied Photovoltaics and a Certificate in Small Business Management. 20 years experience in technical roles and business development in the energy efficiency / renewable energy sector such as solar.

Project Management - Energy Sector**1123706**

Bachelor of Business and MBA. A project manager with over 6 years experience in large tenders in the energy sector and with large corporates and government clients (telecommunications, energy and infrastructure). Currently Project Development Manager / Bid Team Leader in a large energy company.

1117599

Masters in Management, Diploma in Project Management. 10 years experience in the environmental and sustainability industry as a Project Manager with various service providers in the field of water, energy, insulation and conservation services. Now wants to join a renewable energy company and continue his career in business management and operations management.

1124492

Bachelor of Electrical Engineering. 20 years experience in project management in the sectors of infrastructure, energy generation and building maintenance systems. Strong background in sales, BDM and tendering for large federal projects. Specifically skilled in business cases, risk assessment, process management and internal approvals for large tenders / bids / projects.

Carbon Consulting – Carbon Strategy**1111753**

Studies have included Natural Resource Management and a Diploma in Energy Studies. Experience across a spectrum of environmental and sustainability roles, especially in carbon accounting, compliance and strategy for large accounts (NGERS, ISO 14001...). Looking for a new role in carbon management.

1123760

Bachelor of Science in Environmental Sciences. A climate change and sustainability specialist with experience in the public and private sector in Australia, the UK and Europe especially in the development and planning area with public and private sector organisations to develop climate change strategies and compliance to NGERS, CPRS, BASIX... Looking for a move in the private sector.

1115801

An environmental and chemical engineer with years of international experience in industry, consulting and academia, particularly in the areas of environmental, sustainability and climate change. Specialised in CDM, carbon strategy, renewable energy technologies, energy efficiency, NGERS... Looking to join a large company.

Carbon & Energy Trading - Capital Markets**1016026**

A Masters plus a Graduate Diploma in Applied Finance specialising in trading and risk management. An AFMA accredited dealer with over 4 years experience as an Energy trader, physical (spot) and financial markets. Experienced in complex and dynamic energy portfolios. Looking for a move in a trading house / energy retailer.

1037169

MBA and Bachelor of Applied Finance. 8 years experience in energy risk modeling, trading strategy development, energy trading, pricing/forecasting and management of IT requirements of energy trading risk systems. Has worked with the 'big fours', looking for a move with another trader.

1121551

AFMA Accredited and Postgraduate Certificate in Applied Finance. 15 years experience in carbon strategy, interest rates sales & trade, electricity trading and corporate treasury in the Australian financial markets. Currently employed as a senior energy trader - wholesale electricity. Looking for a move to another trading desk.

Sustainability & Environmental Compliance

1109246

An environmental degree with 15 years international experience in consulting in the field of sustainability and corporate social responsibility. Experienced in carbon strategies, sustainability in supply chains, sustainability auditing, implementation of strategies and programs to reduce waste, water and energy consumption, life cycle assessments, green procurement policies, recycled materials markets.

1124098

Environmental and legal studies. International experience in ISO14001, environmental indicators, environmental communications, risk assessment & management, environmental law and environmental impact assessments. Experienced in leading Multidisciplinary teams.

1126098

Finance and Environmental studies. 20 years experience in corporate sustainability with a specialty in environmental planning, sustainability strategies and NSW environmental legislation. Experienced in managing environmental planning projects from proposal development to the delivery of the final report for corporate and government agencies.

Green Building, Energy Efficiency in Buildings

1118532

NABERS Accredited, post graduate diploma – Royal Institute of Chartered Surveyors, Degree BSc (Hons) Building Surveying. 10 years experience in building project management, surveys and audits of commercial offices and buildings, statutory obligations, compliance, supervision of building work and maintenance, energy savings and consulting.

1117823

Master of Environment Management and a Bachelor of Mechanical Engineering. Experienced in GHG auditing, verification and energy saving plans, life-cycle analysis of carbon emissions for green products. Also worked on ISO 14064 and 14044, NGERs, CPRs, wastes and recycling analysis, energy efficiency techniques for buildings, energy rating systems for white goods.

1114971

Master of Engineering Science (Energy Studies), Graduate Certificate in Energy Studies, a Bachelor of Engineering and ABSA accredited. 5 years experience in business development, door to door services and research.

Solar PV Electrical Engineers, Design, Business Development**1108997**

M Eng Sc – Photovoltaics and a BE Mechanical Engineering with speciality in solar energy, solar cell and module manufacturing, solar tracking and energy storage systems. A professional Solar Sales Engineer with several years experience in the solar PV and solar thermal Australian market on both residential and commercial levels. Skilled in design and AutoCAD drafting. Looking for a move in a large solar company.

1003545

BCSE accredited for design, MBA in Technology Management, BCs in Physics and Electrical Technology and an Advanced Diploma in Renewable Energy Technologies. 13 years experience in designing and selling power solutions to large business customers in Australia and the Asia Pacific region, including 3 years in solar stand alone and grid connected and small wind power systems in Australia (B2B only).

49038

Master of Engineering Energy Technology and a Bachelor of Mechanical Engineering (CPEng). 15 years experience in solar thermal and photovoltaic technologies for power generation: research, design, development and commercialization, utility scale power generation using CSP and CPV Technologies at large scale. Experience with the Solar Flagships Program and Integrated Solar Combined Cycle (ISCC) power generation for mining companies. Also experienced in conventional power stations.

Wind Energy: Business Development, Senior Management**1125778**

BEng (Hons) Energy Engineering and speciality in Renewable Energy Systems Technology. 6 years experience in wind farm development, RECs, financial modeling, Environmental Impact Assessment, management of project programme and budget, wind farm design, landowner negotiations, commercial legal negotiations, commercial revenue arrangements, wind turbine technology, health and safety, procurement, consultant and contractor management, public relations

P

Master Degree in Industrial Engineering and 10 years experience in renewable energy projects as design/project/senior engineer and energy consultant/ business developer for world class companies. Experienced in due diligence, tenders, solar energy, development, construction (...). Currently looking for a move in the private sector in a large renewable energy company or consulting group.

100702

Master of Entrepreneurship & Innovation (MEI), Bachelor of Engineering (Industrial) and speciality in Environmental Management. Has been involved in sustainability and commercialisation of clean tech opportunities over the past 10 years as a consultant and developer of businesses. Strong background in wind technologies.

Wind Energy: design, construction, engineering**1124185**

Master in Engineering specialized in electrical generation and a Post graduate studies in energy efficiency. Has been involved in the development, construction and operation of over 2,000MW in renewable projects worldwide, including 1,000MW in the wind sector. 15 years experience in start up, project management, development, design, sourcing and procurement, construction and maintenance and operation of renewable power plants.

1116817

An engineer currently based in South Africa on a power station construction site. Family already based in Australia. Significant background in project management for several large infrastructure, mining and power projects such as wind (300MW). He has project engineering, project controls and contract management expertise.

1117532

15 years experience in the renewable energy sector - landfill gas waste-to-energy and wind power projects. He has had operations, technical and management roles: wind turbine operations, turbine technology, operational process and fundamental maintenance tasks on wind turbines major manufacturers. International experience.
